

KBS : Knowledge-Based System Design

- ◆ Motivation
- ◆ Objectives
- ◆ Chapter Introduction
 - ◆ Review of relevant concepts
 - ◆ Overview new topics
 - ◆ Terminology
- ◆ ES Development Life Cycle
 - ◆ Feasibility Study
 - ◆ Rapid Prototype
 - ◆ Refined System
 - ◆ Field Testable
 - ◆ Commercial Quality
 - ◆ Maintenance and Evolution
- ◆ Software Engineering and ES Design
 - ◆ Software Development Life Cycle
- ◆ Linear Model ES Life Cycle
 - ◆ Planning
 - ◆ Knowledge Definition
 - ◆ Knowledge Design
 - ◆ Knowledge Verification
- ◆ Important Concepts and Terms
- ◆ Chapter Summary

KBS Design 1

Material

[Awad 1996]

- ◆ Chapter 5: Expert System Development Life Cycle
- ◆ Chapter 15: Verification and Validation
- ◆ Chapter 17: Implementing the Expert System
- ◆ Chapter 18: Organizational and Managerial Impact

[Durkin 1994]

- ◆ Chapter: 8: Designing Backward-Chaining Rule-Based Systems
- ◆ Chapter 10: Designing Forward-Chaining Rule-Based Systems
- ◆ Chapter 15: Designing Frame-Based Expert Systems
- ◆ Chapter 18: Knowledge Engineering

KBS Design 2

Material

[Sommerville 2001]

- ◆ Chapter 3: Software processes
 - ◆ waterfall model
 - ◆ evolutionary development
 - ↳ spiral model
 - ◆ formal methods
 - ◆ reuse-based methods
- ◆ Chapter 8: Software prototyping
 - ◆ rapid prototyping techniques

[Jackson 1999]

- ◆ Chapter 14, 15: Constructive Problem Solving
- ◆ Chapter 16: Designing for Explanation

KBS Design 3

Motivation

- ◆ reasons to study the concepts and methods in the chapter
 - ◆ main advantages
 - ◆ potential benefits
- ◆ understanding of the concepts and methods
- ◆ relationships to other topics in the same or related courses

KBS Design 4

Objectives

- ◆ regurgitate
 - ◆ basic facts and concepts
- ◆ understand
 - ◆ elementary methods
 - ◆ more advanced methods
 - ◆ scenarios and applications for those methods
 - ◆ important characteristics
 - ✦ differences between methods, advantages, disadvantages, performance, typical scenarios
- ◆ evaluate
 - ◆ application of methods to scenarios or tasks
- ◆ apply
 - ◆ methods to simple problems

KBS Design 5

ES Development Methods

- ◆ commercial quality systems require a systematic development approach
 - ◆ ad hoc approaches may be suitable for research prototypes or personal use, but not for widely used or critical systems
- ◆ some software engineering methods are suitable for the development of expert systems

KBS Design 6

Problem Selection

- ◆ the development of an expert system should be based on a specific problem to be addressed by the system
- ◆ it should be verified that expert systems are the right paradigm to solve that type of problem
 - ◆ not all problems are amenable to ES-based solutions
- ◆ availability of resources for the development
 - ◆ experts/expertise
 - ◆ hardware/software
 - ◆ users
 - ◆ sponsors/funds

KBS Design 7

Project Management

- ◆ activity planning
 - ◆ planning, scheduling, chronicling, analysis
- ◆ product configuration management
 - ◆ product management
 - ◆ change management
- ◆ resource management
 - ◆ need determination
 - ◆ acquisition resources
 - ◆ assignment of responsibilities
 - ◆ identification of critical resources

KBS Design 8

ES Development Stages

- ◆ feasibility study
 - ◆ paper-based explanation of the main idea(s)
 - ◆ no implementation
- ◆ rapid prototype
 - ◆ quick and dirty implementation of the main idea(s)
- ◆ refined system
 - ◆ in-house verification by knowledge engineers, experts
- ◆ field test
 - ◆ system tested by selected end users
- ◆ commercial quality system
 - ◆ deployed to a large set of end users
- ◆ maintenance and evolution
 - ◆ elimination of bugs
 - ◆ additional functionalities

KBS Design 9

Error Sources in ES Development

- ◆ knowledge errors
- ◆ semantic errors
- ◆ syntax errors
- ◆ inference engine errors
- ◆ inference chain errors
- ◆ limits of ignorance errors

KBS Design 10

Knowledge Errors

- ◆ problem: knowledge provided by the expert is incorrect or incomplete
 - ◆ reflection of expert's genuine belief
 - ◆ omission of important aspects
 - ◆ inadequate formulation of the knowledge by the expert
- ◆ consequences
 - ◆ existing solution not found
 - ◆ wrong conclusions
- ◆ remedy
 - ◆ validation and verification of the knowledge
 - ✦ may be expensive

KBS Design 11

Semantic Errors

- ◆ problem: the meaning of knowledge is not properly communicated
 - ◆ knowledge engineer encodes rules that do not reflect what the domain expert stated
 - ◆ expert misinterprets questions from the knowledge engineer
- ◆ consequences
 - ◆ incorrect knowledge, inappropriate solutions, solutions not found
- ◆ remedy
 - ◆ formalized protocol for knowledge elicitation
 - ◆ validation of the knowledge base by domain experts

KBS Design 12

Syntax Errors

- ◆ problem: rules or facts do not follow the syntax required by the tool used
 - ◆ knowledge engineer is not familiar with the method/tool
 - ◆ syntax not clearly specified
- ◆ consequences
 - ◆ knowledge can't be used
- ◆ solutions
 - ◆ syntax checking and debugging tools in the ES development environment

KBS Design 13

Inference Engine Errors

- ◆ problem: malfunctions in the inference component of the expert system
 - ◆ bugs
 - ◆ resource limitations
 - e.g. memory
- ◆ consequences
 - ◆ system crash
 - ◆ incorrect solutions
 - ◆ existing solutions not found
- ◆ remedy
 - ◆ validation and verification of the tools used

KBS Design 14

Inference Chain Errors

- ◆ problem: although each individual inference step may be correct, the overall conclusion is incorrect or inappropriate
 - ◆ causes: errors listed above; inappropriate priorities of rules, interactions between rules, uncertainty, non-monotonicity
- ◆ consequences
 - ◆ inappropriate conclusions
- ◆ remedy
 - ◆ formal validation and verification
 - ◆ use of a different inference method

KBS Design 15

Limits of Ignorance Errors

- ◆ problem: the expert system doesn't know what it doesn't know
 - ◆ human experts usually are aware of the limits of their expertise
- ◆ consequences
 - ◆ inappropriate confidence in conclusions
 - ◆ incorrect conclusions
- ◆ remedy
 - ◆ meta-reasoning methods that explore the limits of the knowledge available to the ES

KBS Design 16

KBS and Software Engineering

- ◆ software process models
 - ◆ waterfall
 - ◆ spiral
- ◆ use of SE models for ES development
- ◆ ES development models
 - ◆ evolutionary model
 - ◆ incremental model
 - ◆ spiral model

KBS Design 17

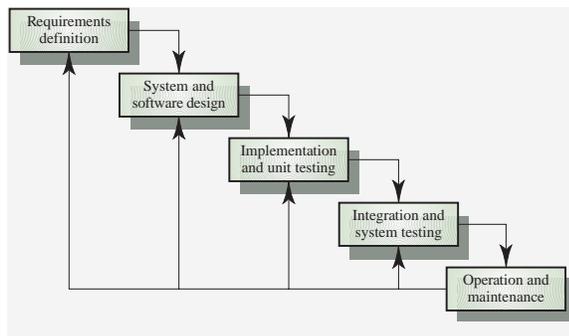

Generic Software Process Models

- ◆ waterfall model
 - ◆ separate and distinct phases of specification and development
- ◆ evolutionary development
 - ◆ specification and development are interleaved
- ◆ formal systems development
 - ◆ a mathematical system model is formally transformed to an implementation
- ◆ reuse-based development
 - ◆ the system is assembled from existing components

[Sommerville 2001]

KBS Design 18

Waterfall Model

[Sommerville 2001]

KBS Design 19

Suitability of Software Models for ES Development

- ◆ the following worksheets help with the evaluation of software models for use in the development of expert systems
 - ◆ identify the key differences between conventional software development and ES development
 - ◊ with respect to a specific model
 - ◆ what are the positive and negative aspects of the model for ES development
 - ◆ evaluate the above issues, and give the model a score
 - ◊ 10 for perfectly suited, 0 for completely unsuitable
 - ◆ determine the overall suitability
 - ◊ high, medium low
 - ◊ explanation

KBS Design 20

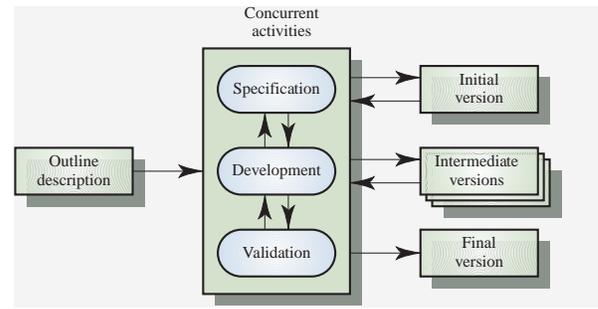

Evolutionary Development

- ◆ exploratory development
 - ◆ objective is to work with customers and to evolve a final system from an initial outline specification. should start with well-understood requirements
- ◆ throw-away prototyping
 - ◆ objective is to understand the system requirements. should start with poorly understood requirements

[Sommerville 2001]

KBS Design 21

Evolutionary Development

[Sommerville 2001]

KBS Design 22

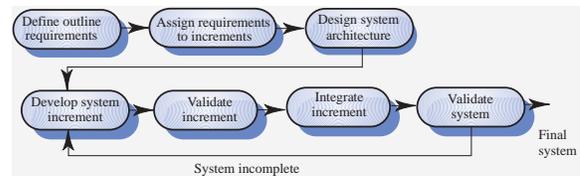

Incremental Development

- ◆ development and delivery is broken down into increments
 - ◆ each increment delivers part of the required functionality
- ◆ user requirements are prioritised
 - ◆ the highest priority requirements are included in early increments
- ◆ once the development of an increment is started, the requirements are frozen
 - ◆ requirements for later increments can continue to evolve

[Sommerville 2001]

KBS Design 23

Incremental Development

[Sommerville 2001]

KBS Design 24

Spiral Development

- ◆ process is represented as a spiral rather than as a sequence of activities with backtracking
 - ◆ each loop in the spiral represents a phase in the process.
 - ◆ no fixed phases such as specification or design
 - ✦ loops in the spiral are chosen depending on what is required
 - ◆ risks are explicitly assessed and resolved throughout the process
- ◆ similar to incremental development

[Sommerville 2001]

KBS Design 25

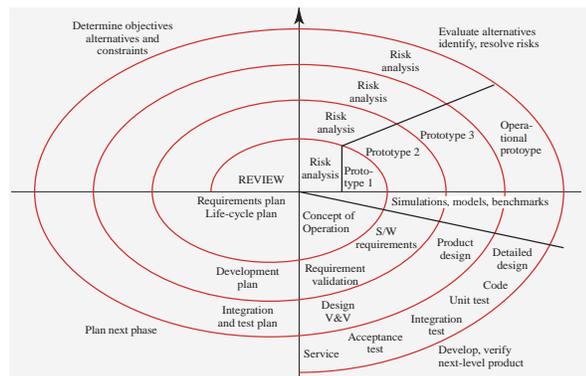

Spiral Model Sectors

- ◆ for quadrants in the coordinate system represent specific aspects
 - ◆ objective setting
 - ✦ specific objectives for the phase are identified
 - ◆ risk assessment and reduction
 - ✦ risks are assessed and activities put in place to reduce the key risks
 - ◆ development and validation
 - ✦ a development model for the system is chosen which can be any of the generic models
 - ◆ planning
 - ✦ the project is reviewed and the next phase of the spiral is planned

[Sommerville 2001]

KBS Design 26

Spiral Model

[Sommerville 2001]

KBS Design 27

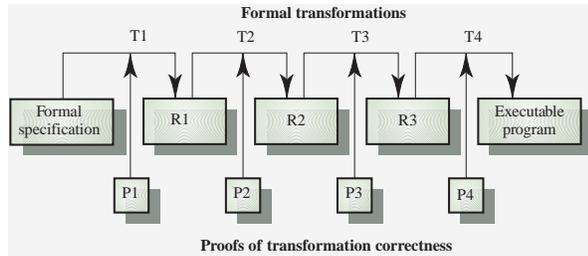

Formal systems development

- ◆ based on the transformation of a mathematical specification through different representations to an executable program
- ◆ transformations are 'correctness-preserving'
 - ◆ it is straightforward to show that the program conforms to its specification
- ◆ embodied in the 'cleanroom' approach to software development

[Sommerville 2001]

KBS Design 28

Formal Transformation Model

[Sommerville 2001]

KBS Design 29

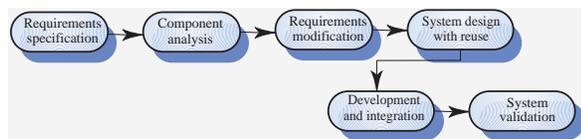

Reuse-Oriented Development

- ◆ based on systematic reuse
 - ◆ systems are integrated from existing components or COTS (commercial-off-the-shelf) systems
- ◆ process stages
 - ◆ component analysis
 - ◆ requirements modification
 - ◆ system design with reuse
 - ◆ development and integration
- ◆ this approach is becoming more important but still limited experience with it

[Sommerville 2001]

KBS Design 30

Reuse-oriented development

[Sommerville 2001]

KBS Design 31

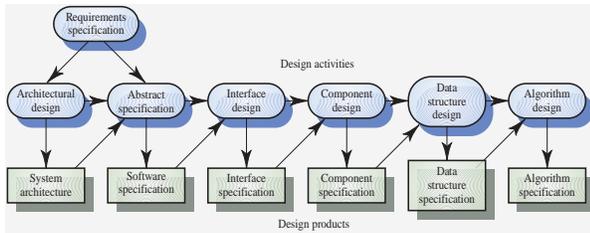

Model Worksheets

Aspect	Evaluation	Score
key differences		
positive		
negative		

- ◆ overall suitability: high medium low
- ◆ explanation

KBS Design 32

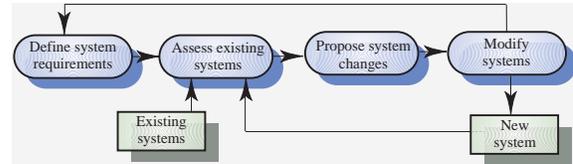

Generic System Design Process

[Sommerville 2001]

KBS Design 33

System Evolution

[Sommerville 2001]

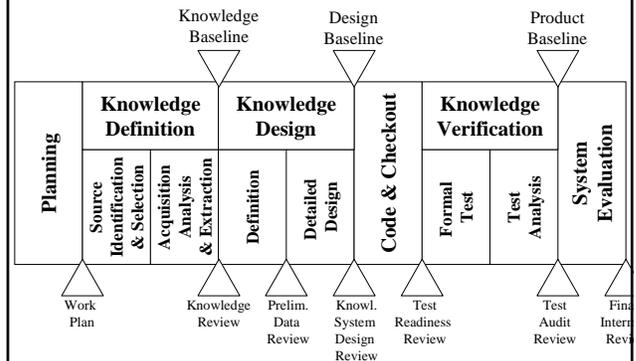

KBS Design 34

Linear Model of ES Development

- ◆ the life cycle repeats a sequence of stages
 - ◆ variation of the incremental model
 - ◆ once iteration of the sequence roughly corresponds to one circuit in the spiral model
- ◆ stages
 - ◆ planning
 - ◆ knowledge definition
 - ◆ knowledge design
 - ◆ code & checkout
 - ◆ knowledge verification
 - ◆ system evaluation

KBS Design 35

Linear Model Diagram

KBS Design 36

Planning

- ◆ feasibility assessment
- ◆ resource management
- ◆ task phasing
- ◆ schedules
- ◆ high-level requirements
- ◆ preliminary functional layout

KBS Design 37

Knowledge Definition

- ◆ knowledge source identification and selection
 - ◆ source identification
 - ◆ source importance
 - ◆ source availability
 - ◆ source selection
- ◆ knowledge acquisition, analysis and extraction
 - ◆ acquisition strategy
 - ◆ knowledge element identification
 - ◆ knowledge classification system
 - ◆ detailed functional layout
 - ◆ preliminary control flow
 - ◆ preliminary user's manual
 - ◆ requirements specifications
 - ◆ knowledge baseline

KBS Design 38

Knowledge Design

- ◆ knowledge definition
 - ◆ knowledge representation
 - ◆ detailed control structure
 - ◆ internal fact structure
 - ◆ preliminary user interface
 - ◆ initial test plan
- ◆ detailed design
 - ◆ design structure
 - ◆ implementation strategy
 - ◆ detailed user interface
 - ◆ design specifications and report
 - ◆ detailed test plan

Code & Checkout

- ◆ coding
- ◆ tests
- ◆ source listings
- ◆ user manuals
- ◆ installation and operations guide
- ◆ system description document

KBS Design 39

Knowledge Verification

- ◆ formal tests
 - ◆ test procedures
 - ◆ test reports
- ◆ test analysis
 - ◆ results evaluation
 - ◆ recommendations

System Evaluation

- ◆ results evaluation
 - ◆ summarized version of the activity from the previous stage
- ◆ recommendations
 - ◆ as above
- ◆ validation
 - ◆ system conforms to user requirements and user needs
- ◆ interim or final report

KBS Design 40

Linear Model Exercise

- ◆ apply the linear model to your team project
 - ◆ map activities, tasks, milestones and deliverables that you have identified to the respective stages in the linear model
 - ◆ use the linear model to sketch a rough timeline that involves two iterations
 - ✦ first prototype
 - ✦ final system
 - ◆ estimate the overhead needed for the application of the linear model in our context

KBS Design 41

Summary Expert System Design

- ◆ the design and development of knowledge-based systems uses similar methods and techniques as software engineering
 - ◆ some modifications are necessary
 - ◆ the linear model of ES development is an adaptation of the incremental SE model
- ◆ possible sources of errors are
 - ◆ knowledge and limits of knowledge errors
 - ◆ syntactical and semantical errors
 - ◆ inference engine and inference chain errors

KBS Design 42

Important Concepts and Terms

- ◆ evolutionary development
- ◆ expert system (ES)
- ◆ expert system shell
- ◆ explanation
- ◆ feasibility study
- ◆ inference
- ◆ inference mechanism
- ◆ If-Then rules
- ◆ incremental development
- ◆ knowledge
- ◆ knowledge acquisition
- ◆ knowledge base
- ◆ knowledge-based system
- ◆ knowledge definition
- ◆ knowledge design
- ◆ knowledge representation
- ◆ knowledge verification
- ◆ limits of ignorance
- ◆ linear model ES life cycle
- ◆ maintenance
- ◆ rapid prototyping
- ◆ reasoning
- ◆ rule
- ◆ semantic error
- ◆ software development life cycle
- ◆ spiral development
- ◆ syntactic error
- ◆ waterfall model

KBS Design 43
